STANDARD OPERATING PROCEDURE (SOP)

How to Publish an Article in Zewa Feeds CMS

A step-by-step visual training guide for the Content Team & Editors to create, design with blocks, preview, optimize SEO, and publish high-ranking articles seamlessly.

Portal: **cms.zewafeeds.com**

Target Role: **Content Editor / Admin**

Updated: **October 2026**

Version: **2.0 (Block Engine)**

📌 Article Lifecycle Overview

Every article in Zewa Feeds follows this strict, safe four-step quality pipeline:

1. DRAFT

Write & Assemble

Title, slug, blocks, images, stat counters & SEO fields.

2. VALIDATE

System Checks

Character lengths, image specs, alt text & category matches.

3. PREVIEW

Live Staging View

Inspect exact desktop & mobile layout via secure token.

4. PUBLISH / SCHEDULE

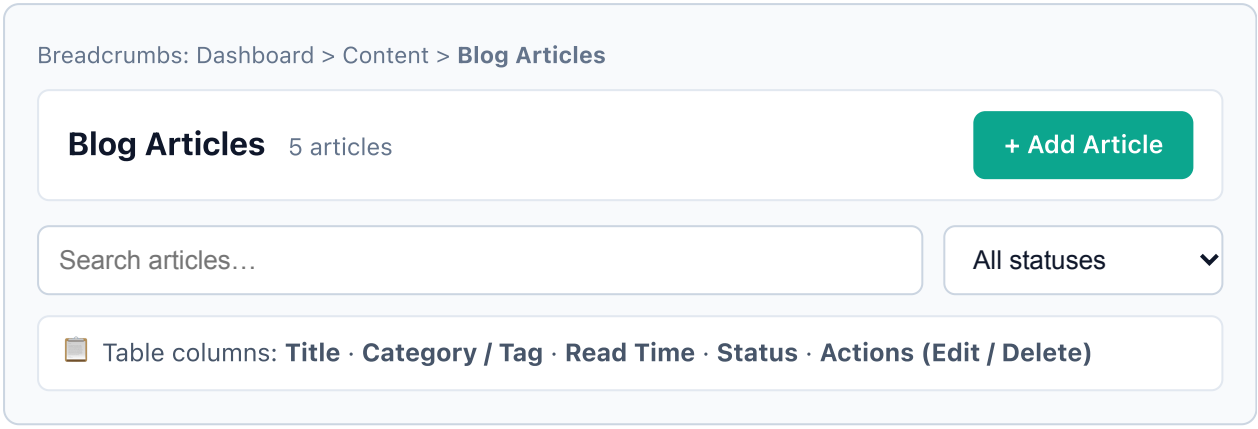

Live Website

Instant deployment to zewafeeds.com/blog & Knowledge Hub.

> 💡 **Why Safe Drafts Matter**
>
> If you edit an already published article, your edits stay as a **pending draft overlay**. The live website remains 100% untouched until you click **"Publish now"**. You can preview changes safely or click **"Discard changes"** at any time.

1 Accessing the Blog Articles Section

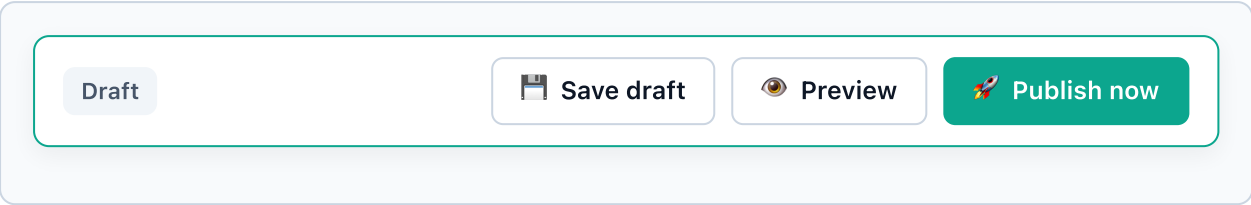

Where to find and manage articles in the CMS dashboard.

- Log in to `https://cms.zewafeeds.com` using your staff email, password, and Email OTP / Authenticator code.
- In the left sidebar, navigate to **Content** → **Blog Articles**.
- Click the green **"+ Add Article"** button in the top right to start a new draft.

2 Mastering the Top Action Bar

The sticky control header tracks publishing status and gives you instant tools.

Button / Indicator	What It Does	When to Use It
Save draft	Saves all field and block edits to the database without publishing them to the public site.	Click frequently while writing. Shortcut to prevent lost work.
Preview	Generates a secure temporary token and opens the live storefront in a new tab.	Always preview before publishing to check formatting and mobile hero.
Publish now	Runs automated sanity checks and immediately updates the live website.	Click once the article is 100% proofread, reviewed, and approved.
Discard changes	Reverts all pending changes back to the currently live version.	Only appears if an already-published article has unreleased edits.
Unpublish	Takes the live article down from the website, reverting it back to a draft.	If an article needs an emergency review or removal from public view.

3 Filling in Core Content (Left Column)

This is where your headlines and rich structured story live.

ARTICLE TITLE * 45/180

Why Natural Carotenoids Outperform Synthetic Dyes

Shown in the hero header, card grid, and Google search. Automatically generates your URL slug!

EXCERPT * 128/300

Science-backed methods for achieving stage-ready vibrancy without synthetic dyes. Natural carotenoids shown to boost gut health and colour.

Shown on cards, the Knowledge Hub, and serves as your fallback Google meta description. Keep under 300 characters.

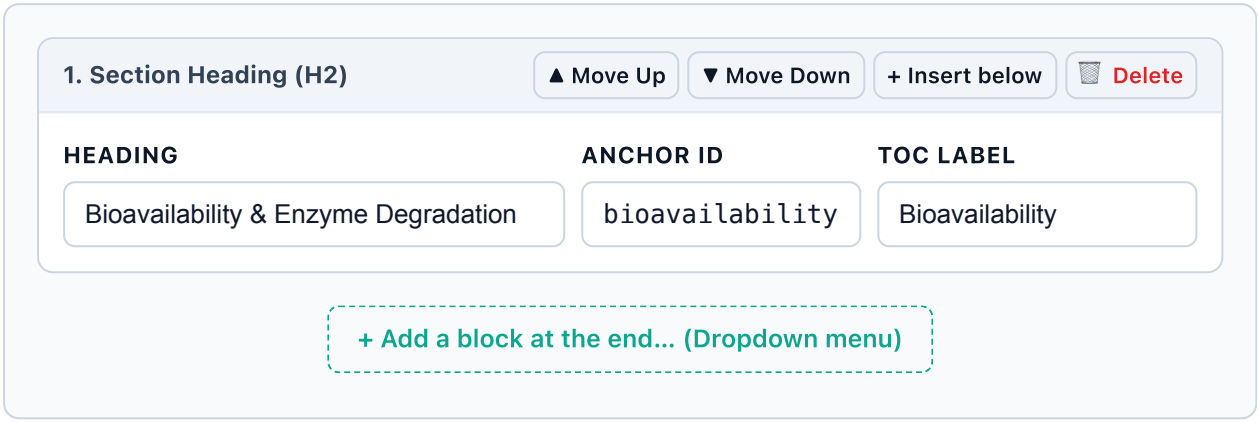

⚠️ **Essential Rules for Titles & Excerpts:**

- **Title limit:** Maximum 180 characters. Make it scientific, clear, and compelling.
- **Excerpt limit:** Maximum 300 characters. The editor will reject anything over 300 characters.
- **Automatic Slug Generation:** When typing the title on a brand new article, the CMS automatically creates the URL slug for you!

4 Building the Body with Structured Blocks

Zewa Feeds uses 15 purpose-built block types instead of unstructured HTML.

Structured blocks give your article the exact premium Zewa Feeds design (callouts, pullquotes, tables, comparison cards, FAQs with Google schema) without any coding!

📚 Complete Blocks Directory (15 Block Types)

Lead Paragraph `lead`

Large, bold opening paragraph that hooks the reader right under the hero title.

Standard Paragraph `p`

Standard body copy. Supports **Phrase-Level Inline Linking** (e.g. link "Betta Bites" → "/products/betta-bites").

Section Heading (H2) `h2`

Main section divider. Creates anchor IDs for jump links and populates the Table of Contents.

Subheading (H3) `h3`

Secondary sub-divider within an H2 section.

Figure (Image) `figure`

High-res inline image from Media Library. Choose frame (16:9, 3:2, 4:3, 1:1), mandatory alt text & caption.

Bulleted / Numbered List `list`

Clean bulleted or numbered items. Simply type one item per line.

Key Takeaways Box `takeaways`

A highlighted teal summary box displaying core scientific bullet points for skimming readers.

Comparison Table `table`

Columns & rows separated by | pipe character. Includes a **Highlight Column** dropdown!

FAQ (Google Rich Results) `faq`

Question & Answer pairs. Automatically generates Google FAQ Schema markup!

Stat Row (Up to 4) `stat-block`

Displays up to 4 key numbers with metrics (e.g. "88%" & "Digestibility rate") in a prominent row.

Pull Quote `pullquote`

Large, stylized italic quote emphasizing a central quote or key insight.

Callout Box `callout`

Informational callout box with custom title. Style: **Information** (blue) or **Zewa Brand** (teal).

“Did You Know?” Box `didyouknow`

Engaging trivia/discovery card highlighting surprising fish nutrition facts.

Pros & Cons `proscons`

Side-by-side green Pros and red Cons comparison cards for ingredients or diets.

References & Citations `references`

Scientific journal bibliography. Format: `Citation text | https://journal-url.org`. Numbered in order.

5 Configuring Metadata, Media & SEO (Right Column)

Critical settings that drive discoverability, aesthetics, and social preview cards.

Taxonomy & Identity

SLUG (PERMANENT URL) *

`why-natural-carotenoids-outperform-synthetic-dyes`

LOCKED ONCE PUBLISHED. Cannot be modified after live release.

CATEGORY

BIOLOGY

Matches blog topic filters on zewafeeds.com/blog.

BADGE COLOUR

Automatic (From Category)

Check "Custom colour" only if you need a specific article override.

READ TIME (MINUTES)

6

AUTHOR NAME

Zewa Research Team

HERO HEADLINE STAT

88% | pepsin digestibility

Scientific credibility badge displayed over the hero banner!

Cover Images & SEO

COVER IMAGE *

Choose from Media Library

Spec #16: 1200×675 (16:9 ratio). High resolution.

MOBILE HERO (OPTIONAL)

Spec #17: 600×750 (4:5 ratio). Ensures fish/subject isn't cropped awkwardly on smartphones!

+ Set Mobile Crop

COVER ALT TEXT *

Discus fish displaying vivid natural red coloration after carotenoid feeding

Essential for Google Image Search and accessibility.

SEO TITLE & DESCRIPTION

Natural Carotenoids vs Synthetic Dyes | Zewa Feeds

Meta description (max 180 chars)

Controls how Google renders your link on search result pages.

6 Previewing, Publishing & Scheduling

Final verification before making the article live to the world.

✅ The 7-Point Pre-Flight Checklist

Complete these 7 checks before clicking "Publish now":

- ✓ **Title & Excerpt:** Title is under 180 chars; Excerpt is engaging and under 300 chars.
- ✓ **URL Slug:** Slug is clean and lowercase with hyphens (e.g. `protein-absorption-in-fish`).
- ✓ **Desktop Cover Asset:** High-resolution image selected from the Media Library with descriptive alt text.
- ✓ **Block Formatting:** Headings (H2) have clear text and short anchor IDs for jump links.
- ✓ **Figure Images:** All inline figures have alt text and appropriate aspect ratios (16:9 or 4:3).
- ✓ **Related Articles:** Picked 1 or 2 related articles to boost reader retention and lower bounce rate.
- ✓ **Preview Inspected:** Clicked **"Preview"** and checked layout on both desktop and mobile viewports.

🚀 Option A: Publish Immediately

Click the green **"Publish now"** button in the top action bar.

- The CMS compiles the article.
- Status changes to `Published`.
- The website triggers instant background regeneration.
- Live on `zewafeeds.com/blog/<slug>` within ~60 seconds!

⏰ Option B: Schedule for Later

Scroll down to the **Schedule** card in the right column.

- Pick your target release date and time.
- Click **"Schedule"**.
- Status changes to `Scheduled`.
- Background worker automatically publishes it at that exact minute!

❓ Frequently Asked Questions & Troubleshooting

Common questions from the Content Team answered:

Q1: Can I change the URL slug of an article after it has been published?

No, by design. Once an article is published, the slug is permanently locked. Changing a live slug breaks existing customer bookmarks, social media shares, and Google index rankings (causing 404 errors). If a slug change is ever mission-critical, an Admin must set up a 301 redirect.

Q2: What happens if I edit an article that is already live?

When you edit a live article and click **"Save draft"**, your edits are saved as an unpublished draft overlay. Visitors on zewafeeds.com continue seeing the existing live version. The new edits only go live when you press **"Publish now"**.

Q3: How do inline links work inside paragraphs?

Under any Paragraph block, click **"+ Link a phrase"**. Enter the exact phrase in that paragraph (e.g., `insect protein`) and the target URL (e.g., `/products/micro-pellets`). The CMS automatically hyperlinks that phrase cleanly!

Q4: How do I remove an article from the live website?

Open the article and click **"Unpublish"** in the top bar. It immediately reverts to a Draft, disappears from the blog index and Knowledge Hub, and returns to your draft list.
